Dear IMLCC Commissioners,

This is the final update about the IMLCC API Implementation Project.

The API endpoints were rolled out in January, which means that now all the functions and processes for expedited physician licensure can be completed via an API - Application Programing Interface - system to system communication and processing.

The API Implementation Project was made a priority project after the August 2024 Commissioner meeting.

Please see the announcement below from Matt Robison, IT Manager, for details about the project and the current status.

mss

_____

Good morning,

As of yesterday, we have our first Member Board live on the API v2 in Production. Hawaii (D.O. and M.D.) successfully launched their integration that will allow for daily calls to our API to pull/update data in their custom licensing system as well as, approve licenses automatically via an API call. We hope to have our second Member Board live on the API within the next few weeks. Overall, we have had 22 of the 55 Member Boards express interest in adopting the API, 6 Boards in active development and 2 Boards live or about to go live.

**Congrats to Gerald McCulla, Matt Sherry, Larron Webb, and Dima Danylevych for their hard work and dedication to get this complex implementation into Production.** The v2 API will ultimately improve the State Boards interaction with the IMLCC iStars II system and the quality of our data.

Thanks

Matt Robison
IT Manager
